I am a hands-on senior technical expert with a proven history of architecting, implementing, and scaling secure technology solutions. I have been foundational in the launch and success of three startups, each having thousands of daily active users. I have grown, led, and mentored teams as large as 20 direct reports that thrive and innovate. I focus on Fullstack Software Engineering, DevOps, Data Analysis, AI, and Leadership.

Recent Professional Technical Experience (Previous 15 Years)

DevOps Manager

Ready Education

2024-Current

- Manages the full Developer and Operations lifecycle for a cutting-edge education technology company that leverages cloud, AI, agentic, and local technology solutions
- Founded, built, and supervises a team of cross-functional engineers and administrators to ensure uptime, reliability, scalability, and security
- Researched, vetted, implemented, and managed several complete DevOps infrastructure and vendor relationships, with over \$200,000 of vendor contract management across several interdependent technology solutions
- Implemented and maintained the DevOps infrastructure built upon OpenTelemetry (OTEL) using tools such as DataDog, Grafana (Loki, Grafana, Temp, and Prometheus), Sentry, and GitHub
- Served as the first Staff-level DevOps and Backend engineer, responsible for DevOps support, backend software development in Go and Python, mentorship, team leadership, and technical expertise across five products
- Worked heavily in AWS ECS, RDS, EC2, S3, and SQS to develop scalable, performant, and high-quality microservices across several verticals
- Utilized Terraform, Ansible, Docker, and Packer to manage systems, infrastructure, and users, including migrating several legacy custom systems to new, standards-based tooling
- Wrote Go, Python, and Java to solve business needs, providing notification services to end-users, delivering thousands of notifications per minute in an affordable and scalable manner
- Set up and maintained several observability stacks, including Loki, Grafana, Tempo, Prometheus, Signoz, and AWS-native tools while spearheading cybersecurity efforts and SOC2 compliance auditing
- Mentored and guided dozens of engineers across teams, products, and technical stacks

Product Software Architect - IoT

Radio Systems Corporation

2023

- Recruited to be the first Product Software Architect for the IoT team, providing technical expertise and guidance in building scalable IoT solutions on AWS.
- Designed several scalable and secure solutions in Typescript that leveraged AWS IoT Core, DynamoDB, Lambdas, and RDS on AWS DevOps pipelines in CodeBuild and CodePipeline.
- Set the standards for code hygiene, best practices, security, and commonality through guidance, mentoring, and policy recommendations that enabled teams to be more effective, productive, and efficient.
- Oversaw three major product launches across several brands, providing technical recommendations and solutions to overcome complex challenges faced by thousands of customers.

Chief Software Architect

Wagz

2017 - 2023

- Hired as the first technical leader and hands-on engineer to design, implement, scale, and maintain the complete technical architecture for a smart pet IoT software and hardware product ecosystem.
- Successfully launched and scaled several hardware devices in the microservices-based software ecosystem that supported thousands of users and their pets with 0 downtime or reported outages.
- Oversaw and led the acquisition of two major competitors, integrating their hardware and software technologies into the Wagz ecosystem.

- Actively implemented and maintained systems that leveraged Go/Golang, Typescript, NodeJS, MySQL, MongoDB, Redis, RabbitMQ, MQTT, Docker, Ansible, Terraform, Prometheus, and Grafana on AWS.
- Worked closely with Amazon during their initial implementation of the Dash Replenishment Program, routinely meeting with Amazon leaders to successfully pilot their certification program and to certify three devices for both Alexa and Dash Replenishment.
- Mentored and guided a team of over 15 cross-domain engineers and leaders to successfully meet rapidly changing business requirements in an agile and innovative environment.

Software Engineering Consultant

Independent Consultant

2015 – 2017

- Led an independent technology consultancy that built scalable, secure, and exciting products and features for companies including Texas Direct Autos, ERT, and Data Recognition Corp.
- Successfully grew the consultancy to three additional contractors, completing over a dozen projects.
- Primarily implemented software and systems solutions in Go/Golang, Python, NodeJS, Typescript, Javascript, React, MySQL, Docker, Jenkins, Ansible, and AWS.

Director of Architecture

Gemr

2014 –2015

- Hired as the first engineer to build a scalable technology solution in an agile bootstrapped startup e-commerce SaaS that enabled user-to-user auctions, sales, and social interactions.
- Successfully launched, growing to thousands of customers and winning awards at technical competitions.
- Designed and implemented a technology solution that leveraged NodeJS, MongoDB, Python, AngularJS, ELK, Jenkins, Docker, and Ansible that experienced 0 downtime.
- Managed a team of 12 cross-functional engineers, designers, and product managers to develop cutting-edge products and integrations.

Software Engineer Contractor

Salon Target

2014

- Short-term Senior Software Engineering consultant contracted to implement a modern technology solution on top of a proof-of-concept MVP in six-months.
- Architected and implemented a new RESTful API and DevOps pipeline that tripled efficiency and reduced bugs by 80%.
- Implemented and migrated to a solution built with NodeJS, MongoDB, Python, Jenkins, and AWS.

Vice President of Engineering

Trunity

2010 – 2014

- Hands-on leader for an EdTech SaaS platform that enabled users to build, customize, and sell digital articles and textbooks with authors receiving a commission on sales that included their contributions.
- Primary technologies used and administered included Java, Python, NodeJS, Javascript, PHP, MySQL, MongoDB, and Jenkins; scaled to thousands of customers and hundreds of authors.
- Successfully oversaw a complicated migration from unsupported technologies to a modern API-driven platform with full DevOps, CI/CD, and cloud support.
- Mentored and motivated a strong team of software engineers, product managers, quality assurance engineers, and designers as members of a cohesive and successful team.

Strongest Technologies and Skills

- Languages: Go, Typescript, Javascript, Python, Java
- Frameworks: Chi, Express, React, Svelte
- Data: MySQL, Aurora/RDS, Redis, MongoDB
- DevOps: Docker, Ansible, Terraform, Jenkins, Linux, GitHub Actions, AWS
- Systems: Fullstack engineering, DevOps, Artificial Intelligence

Professional Academic Experience and Publications

Professor of Computer Science (Adjunct)

2009 - Present

- Teaches and mentors students in courses including Cybersecurity, Cloud Development, Internet of Things, DevOps, and Computer Science at Purdue University Global and Southern New Hampshire University.
- Successfully taught thousands of students over more than 50 courses, routinely earning top evaluations with several students requesting continuing mentorship after graduation.
- Designed and launched several courses from scratch that receive high ratings from students for innovation, content, and practical applications that include learning AWS, GitHub, Docker, Jenkins, Kubernetes, Ansible, Terraform, Python, NodeJS, and Java.
- Published three peer-reviewed research projects in Psychology, Counseling, and Leadership.

Security Clearance, Awards, and Patents

- Active Secret Security Clearance
- Patent 026345 A1: System and Method for Virtual Textbook Creation and Remuneration
- Several Joint DoD and Army awards for leadership and expertise, including the Meritorious Service Medal, Joint Service Commendation Medal, Army Commendation Medal, and the NATO Medal.

Education

- **PhD** in Business Administration and Applied Computer Science
- **Master of Science** in Information Technology Management with focus in AI and Business Intelligence
- **Bachelor of Science** in Computer Science
- **Associate of Science** in Technical Management

I have also earned 2 additional Doctoral degrees and 3 additional Graduate degrees in Counseling, Psychology, and related fields.
